

Think and feel?

Whether it harms those birds and animals?

How does it capture the animals during night time?

Reduces the risk of the farmers...

What about the power source for this system?

Happy to see the analysis of water necessity for crops.

Need not to be worry of the crop security...

Ecofriendly, Harmless and Trustable...

Say and do?

The actuators can be controlled via the application.

The status of the crops can be viewed from any remote locations...

If any animals captured, notifications will be sent to the user's phone.

Hear?

See?

Pain

Need continuous supply of power source

Expense on installation

Need stable network connection

Gain

Ensures the security level of crops

Helpful in finding the kind of animals via camera
